These are my Jacobsen 3800 verticut reels that I have modified to do a better job.

As you see the wheels on the unit are about 2 1/2 inches wide and seem to sink lower into the grass when the reels are lowered.

I have taken rolls of hard plastic the same diameter and machined them to fit between the 2 outer rollers of each side. This will keep the units flat and do a much better job when verticutting your fairways.
