

Funnel Stand

built my version of Doug Thompson's funnel stand that was posted on IGCEMA before I left , boss ok'd most of the cost , but had to use plywood for the hopper part , If they like it I'll up grade to metal next year . cost was about 500 \$. I also put a metal angle piece in the middle of the funnel to help deflect wet top soil down the chute , at least that's what I'm thinking anyway .Painting it tomorrow and I may line the inside with sheet metal later . It was about a 2 day build . Cushman's waiting for parts right front spindle and rear brake pads . I'm tired of waiting.
