

Push mower trailer

Last fab. for a while . Made a mesh bottom trailer so they can use the hose to wash the underside of decks instead of taking it of and tipping mowers on there side spilling oil and gas sometimes .

I reused old axle of the old trailers we have around . Found out that the club car wheels fit on them . So about 200 \$ + 40\$ paint and welding rods .the mesh metal was only 90\$ for a 4 x 8 ' sheet .
