

Fertilizer Spreader Rack

Here is my take from Jeff Jamnik's tip.

Thanks Jeff I thought the idea is fantastic . We don't have motorized spreaders up here but for transporting from green to green (or Tees)it should make it easier for them . only 1 pin on the vertical bar holds it in real we . I took one out for a test run over some rough areas and it worked really well . Took about 6 hrs. to figure it out and make it . The second one only took 2 hrs. Yep I took my rear hitch mod of for the square hitch receiver . Didn't know they made that option . Easier to use for us because we need to use trailer balls once in a while , so now I have a couple of hitches made up with them on to make it easier . It's hard to watch students trying to use a monkey wrench and large adjustable spanner to put a trailer ball on 😊
