

### **Stihl snipper head greasing**

I had trouble last year getting the bolt out on the older snippers to grease the head ,I decided to try this on the old ones and really sped up the time to grease them once in a while during the summer with swepeco 306 in the grease gun . I just drilled it out and put a grease nipple in it ( zerkish ). Also for the brush saws I'm using a cut off wheel . Can sharpen this baby in a minute or less .
