

Club Car precedent brake cables .

I know there probably is an easier way or special tool to get these friggen things off . They are tucked in a nice spot that is hard to see or get at . My rental fleet is on it's fourth year and I'm getting a problem with broken brake cables (3 for 3 on the right side .). Any how I found that a 1/2 washer fits nicely over these clamps enough to compress them and with a punch or pry bar give it a tap and they come out .

Piece of .5 copper works perfectly

The tool is just a piece of 1/2 copper pipe with a T soldered on it .
