

## Logsplitter

The cylinder, slide and anchor come as a kit from Northern Tool. This one's a 4.5" x 24" ram. You need a 6" x 25lb x 66.25" I-beam, and I put a 2" thick plate on the end. Put some lazy, sloppy, random beads on the plate to give the wood something to grab onto...the engine's probably a bit overkill, a 10hp. The tank, pump, coupler and control valve you can get at Northern or Grainger.
