

cushman tailgate / box guard

Ours use to fall of after getting bent all the time . I cut the hinges of the sides of the tailgate and welded angle iron to them . Then I replaced the tailgate with 2x6 boards . If the excavator takes a bite out of one then you just replace the board . It's been on for 2 or 3 seasons and I only replaced the top board once .The last tech put the rails on to protect the box . Nice job he did on it .
